

COMINO HIGH-END PCIE X16 RISERS

with Molex gold-plated sockets and ultra-thin and flexible twinax cable

- Connect GPUs or other PCI-e devices to the motherboard in limited space
- 0% signal loss is guaranteed up to 1-meter cable length
- Separate cable to draw power to the riser means no additional signal noise for data cable
- Wide range of sizes including custom designs
- Use it to build systems for rendering, gaming, AI, and others
- LED indication shows operating mode of risers and the status of external connections

CHECK THIS OUT! Our website uses cookies, as almost all websites do, to help provide you

Comino risers are optimized for efficient work with PCIe devices at a distance from the signal source of up to 1000mm. They comply with the PCIe 3.0 data transfer standard and support speeds of up to 16.0 GT/s while supporting channel bandwidths of up to 31.51 GB/s in x16 mode.

Risers are equipped with their own +3.3V power converter, which allows them to be used with any ATX power supply with +5V and +12V voltage. LED indication shows operating mode of risers and the status of external connections.

We use high-quality gold-plated Molex connectors and gold-plating for the PCB (ENIG, “gold-finger”) when manufacturing Comino risers. Comino risers are produced using lead-free soldering technology and comply with the RoHS environmental safety directive.

Available modifications

Risers: x16 Universal

PCB: x16

Molex NanoPitch cable to connect riser: 500mm

Riser Power Supply: +12v (up to 5.5A) or +5v (up to 2A)
